**3M™ Coban™ 2 Layer Compression System**

**PRODUCT DESCRIPTION**
Latex-free 3M™ Coban™ 2 Layer Compression System delivers comfortable and effective compression for patients with oedema associated with venous leg ulcers and related conditions. The soft gentle foam layer provides patient comfort and the cohesive outer layer delivers sustained compression. These revolutionary interlocking materials help reduce slippage and offer patients an improved level of comfort and mobility. The two layers are less bulky than other multilayer systems allowing patients to wear normal footwear and maintain an active lifestyle, whilst providing clinically-effective and sustained compression.

**INDICATIONS**
3M™ Coban™ 2 Layer Compression System is indicated for therapeutic compression in the treatment of conditions, such as venous leg ulcers.

There are no known contraindications or precautions.

**METHOD OF USE**
The application technique is easy to learn and involves the following:
- Apply the unique inner foam comfort layer with minimal overlap.
- Apply the outer compression layer at full stretch with 50% overlap.

After application the two layers cohere to form one thin conforming compression bandage. This can be removed simply with bandage scissors or by unwrapping.

**FEATURES / MODE OF ACTION**
- The inner comfort layer provides a soft foam surface to go next to the skin, improving comfort and resisting slippage.
- The outer layer is applied at full stretch. It has been designed to offer effective resting pressure and peak working pressure, making the system beneficial for both mobile and immobile patients.
- The layers cohere to form a stiff sleeve, which supports the calf muscle pump and provides high compression.

**FREQUENCY OF CHANGE**
3M™ Coban™ 2 Layer Compression System may be worn for up to seven days.

**SIZES / SPECIFICATION**
3M™ Coban™ 2 Layer Compression System is supplied as a kit containing:
1. Roll No.1, the comfort layer (4in x 2.9yd/10cm x 2.7m unstretched)
2. Roll No. 2, the compression layer (4in x 5.1 yd/10cm x 4.7m fully stretched)
