Quattro® Overlay Mattress System

**PRODUCT DESCRIPTION**
The Quattro® Overlay Mattress System is clinically proven to be effective in the prevention and treatment of pressure ulcers in all care environments.

**INDICATIONS**
The Quattro® Overlay is designed for patients at very high risk of pressure ulcers and for the management of patients with existing pressure damage.

**CONTRAINDICATIONS/PRECAUTIONS**
Alternating mattress systems should not be used for patients with unstable fractures, gross oedema, burns or intolerance to motion. Mattress systems should be used as part of a pressure ulcer treatment and prevention programme.

**FEATURES/MODE OF ACTION**
The Quattro® Overlay Mattress Replacement System features:
- Quattro® Therapy: during the 1-in-4 alternating active cell cycle the patient is supported on at least 75% of the mattress surface at all times
- Continuous Low Pressure Therapy: optimum pressure distribution
- AUTOsupport™: fully automatic pressure adjustment
- ODS™ Ortho-differential cell design for optimum patient support and security
- Low air loss feature to reduce humidity and help manage the patients microclimate
- Maximum inflation mode
- Transport facility: allows unpowered support for up to 12 hours
- CPR: simple and effective rapid deflation valve
- Comfort control: allows the carer to adjust the comfort setting
- Phase Flow™ pressure control pump operates on demand only, reducing power consumption, noise and extending service life
- Audible and visual alarm and fault indicators
- Fully launderable: the entire mattress can be thermally decontaminated
- Vapour permeable, waterproof, two-way stretch cover with welded seams
- Cable management facility
- Modular construction: simple to repair and service
- Optional cushion that can be connected directly to the mattress.

**SIZES/SPECIFICATIONS**
Dimensions - 1930 x 855 x 130mm
Number of cells – 17
Maximum user weight – 160kg/25st
Minimum user weight – none
The Quattro® Overlay is also available in a double bed version
